London, UK | Immediate Joiner | Full UK work authorisation — currently no sponsorship required

Professional Summary

Senior Full-Stack Engineer | MSc Computer Science, University of Bath

4 years of full-stack engineering experience across **Fintech** and **Enterprise SaaS** in India and the UK. Served as Founding Engineer in London, architecting cloud-native AWS infrastructure from scratch and leading a cross-functional team of 8. Previously delivered regulated KYC/AML fintech solutions at Signzy and **enterprise AI/NLP** products at AccernAI, working with clients including UniCredit, Mizuho Bank, and Interactive Brokers. Deep expertise in **Python, Node.js, TypeScript, React, Next.js** and **AWS** with a strong track record in performance engineering, scalable system design, test quality and known for fast decision-making in ambiguous environments and a high drive for continuous learning. Actively seeking a Senior or Founding Engineer role at a high-growth UK startup in SaaS, DevTools, or Generative AI and Agentic AI.

Technical Skills

- Proficient: **Node.js, Python, JavaScript, TypeScript, Nest.js, Next.js, Pandas, NumPy, Tensorflow, React.js, React Native, Redux, AWS** (EC2, S3, SES, EKS, ECS/Fargate, API Gateway, Lambda, VPC, IAM, Cognito, CloudFront, Bedrock), **Terraform, Kubernetes, Helm, Docker, Tailwind, PostgreSQL, MongoDB, Prisma, REST, GraphQL, Kafka, Redis, Elasticsearch, Jest, Cypress, JWT, Grafana, Loki, Git, Jira, Cursor, Claude Code, Gemini, Copilot, Langchain, LangGraph, HuggingFace, LLM, Agents, Tools, MCP, OpenAI, CrewAI, FAISS, ChromaDB, AstraDB, Embedding, Neo4j, HTML, CSS, ShadCn, MaterialUI**
- Exposure: Argo CD, Nginx, Pydantic, SQL, NoSQL, GraphDB, Cypher Query Language, MQ, Kibana, Selenium, Keycloak, **OAuth2**, SAML, System Design, Data Structures
- Familiar: PyTorch, Express.js, Keras, Finetuning, Ollama, Pinecone, Cassandra, Attention Mechanism, Transformers

Work Experience

Founding Software Engineer

Aug 2025 - Feb 2026

Atyourtime Technology, London, United Kingdom

Early-stage B2B SaaS and B2C startup building a patented Tag & Scan last-mile delivery verification platform, serving food, retail, pharma, and logistics industries.

Note: Successfully delivered the core architecture and provisioned cloud infrastructure; parted ways due to the company's deferred salary/equity-only structure.

- **Engineering Leadership & Strategy:** Acted as the core technical liaison between the Founder and the engineering team. Established all Agile/Scrum ceremonies and led the full sprint lifecycle across backend, frontend, and mobile workstreams. Conducted onboarding and skills development for new hires; led 70% of interviews and directly hired 5 engineers, forming a cross-functional team of 8 including backend, frontend, mobile, and UI/UX.
- **System Architecture & Infrastructure:** Architected and provisioned enterprise-grade AWS infrastructure (EC2, ECS, Fargate, S3, CloudFront, VPC, IAM, SES, API Gateway, Lambda, DynamoDB) automated end-to-end with Terraform, establishing CI/CD pipelines across all core repositories and laying the foundation for a multi-subsidiary platform.
- **Product Lifecycle & Design:** Collaborated with UI/UX designers to review all product designs on Figma, translating business goals into detailed User Stories and Use Cases that drove task clarity in sprint planning and feature assignments.
- **Full-Stack Development:** Delivered 60% of the customer-facing application by completing the core Restaurant Module covering franchise and standalone restaurant discovery, menu display, and end-to-end order processing, alongside 30% of the User Microservice. Implemented platform-wide authentication and authorisation using AWS Cognito for secure, scalable user management across customer and restaurant portals. Architected and conducted code reviews for the Notification, Driver, and Agent Microservices, ensuring architectural consistency across the backend.
- **Technical Standards:** Defined and enforced the organisation's code review protocols and engineering best practices, ensuring production-grade code quality across a shared codebase built to support multiple subsidiaries.

Senior Software Engineer-FullStack

Nov 2022 - Nov 2023

AccernAI, Bangalore, India

Headquartered in New York, \$40M raised, B2B Gartner-recognised no-code NLP platform delivering enterprise-grade AI-driven research and analytics for financial services and government; clients include UniCredit, Mizuho Bank, and Interactive Brokers.

- **Authentication & Authorisation Overhaul:** Owned end-to-end authentication and authorisation across the platform, diagnosed and resolved a critically broken auth module, implementing graceful error handling and transitioning from symmetric to RSA-based asymmetric encryption for inter-service API tokens. Enabled role-based access control across all GraphQL service endpoints, validating 90% of functionality pre-release. Integrated OpenAI API to allow clients to query and interact with analytical data directly from their database.

- **UI/UX Performance Optimization:** Refactored dashboard pages using component decoupling and targeted React hook optimisation, improving component visibility speed by 80% (validated via Lighthouse reports). Resolved excessive render cycles on list-heavy pages including caching, raising overall Lighthouse performance score from 70 to 90.
- **QA Release Automation Tool:** Built an internal CLI tool to automatically extract and categorise Jira tickets, features and bug fixes per release cycle, reducing manual QA effort and streamlining pre-production release validation.
- **Test Coverage Ownership:** Maintained strict Test Driven Development discipline across all new feature development, keeping pace with SonarQube thresholds for code coverage and code smell. Inherited a frontend E2E test suite at 48% Cypress coverage and raised it to 80%+ upon departure, nearly doubling test coverage.
- **Staging Deployment & Hotfix Leadership:** Owned the full staging release lifecycle from deployment through monitoring and led the resolution and production deployment of 6 hotfixes during tenure, ensuring platform stability under live conditions.

Career Break

Jun 2022 - Nov 2022

Took deliberate time post-Signzy to evaluate senior engineering opportunities aligned with cutting-edge and high-growth technology environments.

Software Engineer FullStack

Jul 2020 - Jun 2022

Signzy, Bangalore, India

B2B AI-powered identity verification and KYC/AML compliance platform helping 500+ businesses securely verify users and prevent fraud; clients include HSBC, Mastercard, Citi, AmazonPay, Stripe.

- **End-to-End Project Ownership:** Led the team and held complete ownership across the full delivery lifecycle – planning deployments, running QA sanity checks, shipping features and hotfixes, leading client-facing meetings, gathering requirements, and committing to and hitting delivery timelines across two concurrent banking client engagements.
- **DIY Platform Leadership & Delivery:** After one year, took over technical leadership of the DIY onboarding platform built nearly from scratch driving it through full UAT and delivering to production before departure. Architected and deployed VKYC modules for current account openings, integrating VKYC with third-party service providers via SSO, and successfully delivering compliant FinTech onboarding solutions for two major banking clients (Axis Bank and IndusInd Bank).
- **Onboarding Performance & Reliability Engineering:** Rewrote blocking synchronous logic into fully asynchronous workflows, cutting account opening process time by 60%. Conducted root cause analysis on recurring DB failures, identifying missing indexes as the core issue implementing targeted DB indexing that reduced process failure rates by 85–90%, directly improving completion rates at scale.
- **Technical Leadership & Cross-Functional Collaboration:** Served as the sole technical point of contact across both projects mentoring junior developers, collaborating with PMs and business analysts, and consulting directly with Axis Bank and IndusInd Bank on requirements, timelines, and deliveries.

Software Engineer Internship

Sep 2019 - Mar 2020

IntelliApt Technologies, Bangalore, India

- **Image & Thumbnails Lazy-Progressive Load React Library:** Engineered a custom image component library providing built-in support for lazy loading and progressive image loading, including lazy-loaded placeholder images.
- **Linux Systemd Service & Network Monitoring:** Built a Linux systemd service to intercept and persist RX/TX network packet data across system lifecycle events, enabling session-level network usage analysis, supporting backend performance profiling and server-side diagnostics.
- **Chrome Extension Development:** Built three Chrome extensions covering system resource monitoring (CPU, RAM, disk utilisation), network data usage tracking via HTTP content-length interception, and bandwidth optimisation through image download blocking.

Projects

- **AgentCV** ([githubLink](#), [Live](#)): May 2026 - Jun 2026
Developed an **autonomous AI Proxy Agent** using **CrewAI** and **Llama 3.1 (8B) LLM** model over a high-performance **FastAPI** backend, integrating **strict prompt guardrails** to ensure domain-specific conversational logic. Architected a low-latency **RAG pipeline** using **Groq's LPU engine** and **LangChain** to eliminate hallucinations by grounding responses in unstructured data. Optimized context retrieval by implementing semantic chunking and generating mathematical embeddings via HuggingFace
- **TikiTu** (frontend : [githubLink](#) , backend : [githubLink](#)): Aug 2025 - Present
Full-stack DevOps project implementing production-grade cloud infrastructure with **Terraform** on **AWS**, featuring a **Next.js** and **Nest.js**, **Typescript** web platform, **React Native** mobile app, and **AWS Cognito** for authentication. Demonstrates real-world engineering patterns including **webhooks**, **microservices**, **event-driven architecture**, and push notification delivery.

Education

- **Master of Science, Computer Science | University of Bath, United Kingdom** Oct 2023 – Jul 2025
 - Full-time postgraduate study
 - Dissertation: Cross-platform React Native application for real-time information dissemination via push notification.
 - Major Modules: Theory of computation, Functional Programming, Databases and Data Privacy Regulations(**GDPR**), Human Computer Interaction(HCI), Entrepreneurship
- **Bachelor of Engineering, Computer Science | Chandigarh University, India** Jul 2016 – Jun 2020
